

CF-87 SANITARY FLUSH BOTTOM TANK VALVE

SPECIFICATIONS

Models CF-87 and CF-87J Valves are manufactured from type 304 and type 316 stainless steel and are polished inside and outside. Even the hand wheel is stainless steel. The stem and cap employ a conventional "O" ring for sealing. The outlet on the tank is one size larger than valve. The attachment is clamp type sanitary. The outlet shown is Tri-clamp, other connections are available on request.

CF-87 Valves are extensively used not only in the food industry where a sanitary valve is required but also in kindred industries including cosmetic, drug, pharmaceutical and chemical plants where a true flush bottom valve of clean design is needed.
